

B

A treemap visualization showing the distribution of plant families in the Kew herbarium collection. The largest family is Fabaceae (815 specimens), followed by Poaceae (977). Other prominent families include Asteraceae (949), Rosaceae (106), and Iridaceae (163). The treemap is color-coded by family, with Fabaceae in dark purple, Poaceae in light purple, Asteraceae in dark blue, Rosaceae in light blue, and Iridaceae in dark red. The size of each rectangle corresponds to the number of specimens in that family. The treemap is organized into a grid-like structure, with families grouped together. The largest family, Fabaceae, is located in the top left corner. Poaceae is in the middle left. Asteraceae is in the bottom left. Rosaceae is in the bottom center. Iridaceae is in the top center. The right side of the treemap contains many smaller families, including Ranunculaceae, Rubiaceae, Convolvulaceae, Asparagaceae, and Amaranthaceae.
